

SPECIAL MEDIUM VOLTAGE VARISTORS – SV SERIES

Description

The SV series is a series of lead style epoxy coated square or rectangular shaped varistors with an AC operating voltage ranging from 60 V to 550 V. There are two groups of these varistors.

The first consists of square shaped varistors with extremely high current and energy capabilities and a low clamping voltage, providing an increased level of protection necessary for the transients expected in telecommunication and AC power networks. Compared to electrically equivalent disc varistors, SV varistors come in smaller nominal dimensions.

With the second SV series group, the customer is offered the opportunity to design their own optimum varistor to suit their specific application, within the dimensions that are possible. Parameters free to be chosen are: non-standard DC/AC operating voltage, leakage current, clamping voltage, maximum surge current, energy absorption level, maximum dissipation power as well as shape, the dimensions being the function of required electrical parameters and vice-versa.

Features

- Operating voltage range V_{rms} 60 V to 550 V.
- Operating voltage range V_{dc} 85 V to 745 V.
- 6 model sizes equivalent to standard disc varistors: 5 mm, 7 mm, 10 mm, 14 mm, 20 mm, 23 mm.

Full Custom Parameter Designed Medium Voltage Varistors

The SV series group of full custom parameter designed varistors consists of square and rectangular shaped varistors, available either as epoxy coated lead style components or as metalized pellets.

The customer can specify the varistor electrical properties and set the limits of size parameters in accordance with the General Technical Data, as provided below. The customer can also choose to have standard electrical parameters in a non-standard varistor shape and size to best fit the available housing. The customer has our full engineering support in realizing his specific protection requirement.
